

# CoalfireOne<sup>SM</sup> full-service and self-service scanning offerings

Vulnerabilities emerge every day. Some security teams are well equipped to deal with perpetual cyber attacks. Some are not – and that’s okay. Either way, Coalfire can help.

While regulatory compliance doesn’t guarantee security, it’s a critical step in reducing the risk of cyber attacks. Coalfire makes the often-complex and daunting process of compliance easier with the CoalfireOne platform. Developed and used by our own auditors, the platform provides category-specific compliance and risk management solutions, all in one place – from one experienced company. The CoalfireOne platform is our flagship SaaS product that helps you navigate the complexities of compliance, bolster security, and reduce risk.

## WHY SCANNING YOUR ENVIRONMENT IS CRITICAL

Internal and external vulnerability scans are a safe and integral part of proving and maintaining compliance – without disrupting network operations. Vulnerability scans also help you:

- Identify potential vulnerabilities inside and outside your network and applications.
- Search networks and applications for breaches that could result in identify theft, credit card fraud, spam, malware, and more.
- Quickly and easily comply with industry-specific requirements and internal compliance processes, such as requirements for PCI Approved Scanning Vendors (ASV) scanning.

## COALFIREONE SCANNING SOLUTIONS

The CoalfireOne Scans platform provides a quick, easy, and inexpensive way to confirm system protection. Using proprietary technology, organizations of any size can run scans against internal networks, while external scanning checks for all known vulnerabilities within a defined network. In consideration of PCI ASV compliance needs, CoalfireOne Scans is the certified scanning solution approved by the PCI Security Standards Council (SSC). Coalfire has been a certified ASV since the inception of the program.

We offer two services - full service vulnerability scans and self-service vulnerability scans. Each of these have been purposely designed to be easy to deploy and proven to add valuable insight into your IT environment.

SERVICE	DESCRIPTION	APPROACH	BENEFIT
<b>Full-service vulnerability scans</b>	The CoalfireOne Scanning Services Team manages your vulnerability scans using CoalfireOne, allowing unlimited rescans on demand throughout the subscription.
