Developer champion services

Vital support to ease and enable secure software development

Not all developers are security experts, just like not all security experts are developers. Finding and retaining the right resources to manage software vulnerabilities can be quite the challenge. Coalfire fills your AppSec skills gap, naturally upskilling your current and future resources to help you effectively manage software security risk.

Your security champion

With extensive experience in both security and development, our consultants add immediate value right from the start. We help you understand and prioritize output from the various tools you've implemented, as well as act as a sounding board for the potential impact of code fixes and new features.

Our consultants bring more than just experience with scanning tools; our skillsets include secure development and architecture, which enables us to provide relevant, AppSec-specific guidance and coaching across development, architecture, and penetration testing.

As the number of applications covered increases and more staff contribute, we accelerate your ability to scale your AppSec program by:

- Helping you navigate SAST and DAST scan output
- Advising you on risk acceptance decisions
- Providing essential, real-time design and development guidance on specific pieces of code
- Helping you understand the amount of coverage you're currently getting from deployed tools

After successfully discovering vulnerabilities, we help your team verify which findings are truly exploitable and then support you through issue resolution. Along with helping you reproduce the vulnerabilities, we offer guidance and input on proposed remediation and mitigation strategies.

Why Coalfire

- Our AppSec consultants have experience in both software engineering and security consulting, which means we're able to deliver modern, actionable guidance on all aspects of application security.
- We conduct more than 1,000 complex projects each year for clients in the technology, healthcare, financial, manufacturing, energy, and retail industries.
- Our team comprises experienced testers of the world's largest cloud service providers, including Amazon, Google, IBM, Microsoft, Oracle, and Salesforce.
- For the past 10 years, we have trained and educated security professionals at Black Hat in the advanced tradecraft we developed.

Upskill development and engineering resources by bridging the security gap at the source.
